

HILDEBRANDT HYDRAULICS

REPAIR

We disassemble, test and evaluate damage cylinders to discover the underlying problem. That is the only way to fix things right. Repaired with quality replacement parts, each cylinder is welded, honed, the piston is inspected, tested, painted and wrapped to meet your requirements. We have the capabilities to re-rod or re-chrome bent or broken rods and modify your cylinder to accept standard seals that will reduce future repair costs.

CAPABILITIES

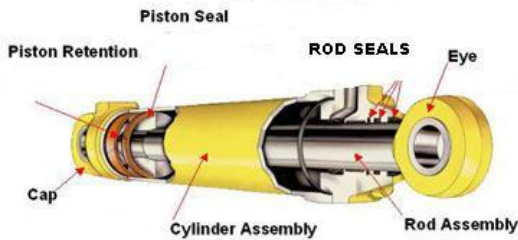

Since 1968, we have worked with heavy earth moving equipment companies, scrap yards, steel mills, trash and recycling companies. We manufacture and maintain cylinders that will stand up to these demanding environments. We are not limited to certain brands of cylinders. We custom build and repair cylinders of all sizes. From the small bore cylinders to the large bores 24"+, we can handle them all.

CUSTOMER SERVICE

From the moment your cylinder is dropped off to when it is picked up, it is inspected at each stage of the process. In order to reduce down time, we stock many of our customers most commonly used cylinders. We also maintain a fleet of trucks for pick-up and delivery service in emergencies.
